

All at a glance, all under control

Reliably,
and with the added safety of prior knowledge, Cargobull Telematics relays changes in axle loadings, tyre pressures and brake wear to you.

Consistent control
Temperature fluctuations and incorrect settings can be detected immediately, permitting systematic correction.

Throughout Europe,
you are kept informed at all times on the status and whereabouts of your trailer, and on the condition and temperature of the load.

Hidden
by its concealed installation, the telematics system is secure against unauthorized manipulation and removal.

Optimised operations for enhanced cost-efficiency

Cargobull Telematics gives you total control over temperature-regulated loads, remaining cooling unit operating hours and your trailer's condition, even in the case of unaccompanied trips. You see everything, everything is under control.

And Cargobull Telematics help you to reduce costs per mile:

- Fuel costs – thanks to optimum monitoring of tyre pressures, for example.
- Servicing and non-availability costs – thanks to preventative maintenance.
- Communications costs – thanks to low roaming charges and Management by Exception; no unnecessary deluge of data.
- Insurance premiums – thanks to the extra safety and security provided by having the trailer telematics on board.

just more.

Knowledge is power

Cargobull Telematics – the trailer telematics system continuous information

Indispensable for refrigerated loads, high-security movements and just-in-time deliveries, Cargobull Telematics

- keeps you informed at all times on the location and status of your trailer, even in the event of unaccompanied trips and when the vehicle is parked.
- takes the load off of drivers, and dispatchers – both receive the vital information automatically.
- helps you achieve greater efficiency, via shortened out-of-traffic times and unladen trips – you deploy your fleet flexibly and clearly.
- tips you off immediately in case of imminent cargo damage, theft and advises you of the route travelled.
- integrates the data received into your existing deployment software.
- enables you to configure the system precisely to your needs – via the Internet if you wish.
- transmits all signals to you at regular intervals, or immediately on request, at your option.

Cargobull Telematics – enabling you to monitor everything that happens on the trailer, the load and the equipment. At all times. Can be retrofitted. To all makes of vehicle.

Help from on high

Cargobull Telematics is based on GPS and GSM, the latest technological standards for mobile communications. The data is transmitted via text message and GPRS, an innovative mobile data service, directly to your base PC or mobile phone.

The necessary telematics terminal device and peripherals have been developed jointly with Bosch-Blaupunkt specifically for installation in trailers. A working temperature range of -40° to +85° C and maximum impact- and vibration-proofing specifications assure trouble-free operation even under extreme conditions.

That is what is meant by the “Automotive Standard”.

An intelligent battery management system assures long standby times, even with the trailer disconnected from the unit – for weeks, if necessary.

Our system partners:

On the safe side

The customer is there, too

Cargobull Telematics enhances:

- customer satisfaction – guest access permits the customer to track where his goods are right now, using his PC or mobile.
- the safety and security of your trailer and its load – the burgeoning incidence of attacks and muggings makes linking of the system, throughout Europe, to the Bosch Communication Center, with relaying of emergency calls and alarms to the police or control room, not merely sensible, but vital.
- utilisation of your fleet and the productivity of your workforce – thanks to deployment analysis and optimisation.

Cargobull Telematics – condition and position tracking, vehicle and load monitoring, anti-theft security. Puts you on the spot, in control, all the time, everywhere.
