IAA TRANSPORTATION 2026 | HANNOVER

GERHARD VAN DER MERWE • DAVID DE VITS

PRESS PRESENTATION • 14 SEPTEMBER 2026
OUTDOOR PAVILION 33

A NEW CHAPTER SINCE 2024

Building on specialist heritage.
Investing in a stronger future.

In 2024, a new chapter began -
combining Van Hool's specialist
expertise with GRW's practical,
customer-focused approach.

2024 A NEW BEGINNING

April 2024: GRW acquires the Van
Hool Industrial Vehicles activities.

2026 LOOKING AHEAD

Building on our heritage. Investing in the future.
Focused on what comes next.

MULTI-STACK CONTAINER CHASSIS

BACKSLIDER CHASSIS

- 45/40' tunnel containers
- 2 x 20' containers
- 20' containers centre or rear
- Pneumatic rear extension slide
- Manual front extension head

30'/20' CHASSIS

- 30' or 20' tank containers
- Low tare weight
- Open rear end and low step for safe,
- driver-friendly access

20'/7.82 M CHASSIS

- 20' tank container
- Swap tanks 7.15 - 7.82 m
- Robust construction for demanding applications
- Low tare weight to excellent accessibility and safety

INTRODUCING PULL LOAD TECHNOLOGY

- FASTER AND SAFER UNLOADING
- MINIMAL MAINTENANCE
- LOW COST OF OWNERSHIP

NEW FOR IAA 2026

HOW IT WORKS?

03 PULLBOX

Positioned at the front of the trailer, the Pullbox pulls the cable and drives the shield forward, pulling the load out fast and safely.

01 SHIELD

The shield is the active component that moves from the front to the rear, pushing the load horizontally out of the trailer, ensuring a controlled and even discharge of the entire load.

02 CABLE SYSTEM

A cable runs continuously around the inside of the trailer in a closed loop, making the shield movement possible.
