

The new standard

INGENIOS 

For maximum performance

The INGENIOS chassis combines a low tare weight with high robustness, which makes it ideal for demanding transport tasks. With a floor load capacity of 8,000kg, a fully galvanised construction for lasting corrosion protection and a repair-friendly design, it provides the basis for a long service life and low running costs. This ensures the trailer will remain cost-effective in use for many years to come.

Which chassis is right for your application?

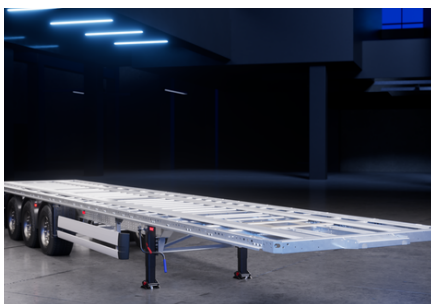

Whether you need maximum payload, the highest load-bearing capacity, or a consistently lightweight design – Schmitz Cargobull offers the right chassis solution for a wide range of transport tasks.

INGENIOS chassis
for maximum
performance

INGENIOS

The INGENIOS chassis combines low weight, high load-bearing capacity and long-lasting corrosion protection. It is designed for a wide range of applications and, with a standard floor load capacity of 8t, offers a cost-effective solution for day-to-day transport operations.

X-TOUGH chassis
for heavy-duty
applications

X-TOUGH

With a standard floor load capacity of 9.5t, the X-TOUGH chassis is designed for heavy goods, intensive forklift operations and use in markets with maximum permissible weights exceeding 44t. Its robust construction proves particularly effective in industrial, beverage and construction site logistics.

ecotrail® chassis
for maximum
payload

e

The lightweight BERGERecotrail chassis, with a tare weight from 4.8t, is particularly suitable for pallet, volume and CEP transport, where every additional tonne of payload delivers economic benefits.

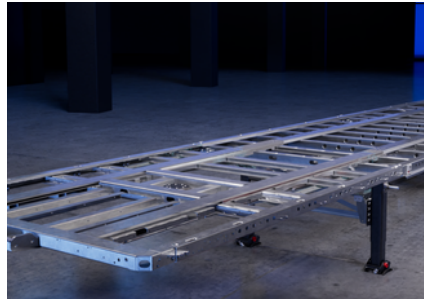

INGENIOS - Designed for cost-effective transport

The INGENIOS chassis combines Schmitz Cargobull's tried-and-tested strengths with practical innovations. The result: a robust, durable and cost-effective chassis solution for a wide range of applications.

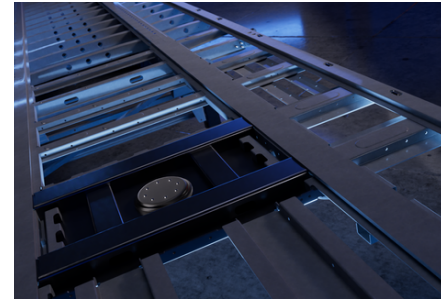

Modular design

Easy repairs, high vehicle availability. Bolted, riveted and clinched joints allow individual components to be replaced easily and facilitate repair work.

New longitudinal beam profile

Greater stability under load, less wear during operation. The new longitudinal beam profile with a continuous top flange ensures high flexural stability and reduces chassis deflection under load.

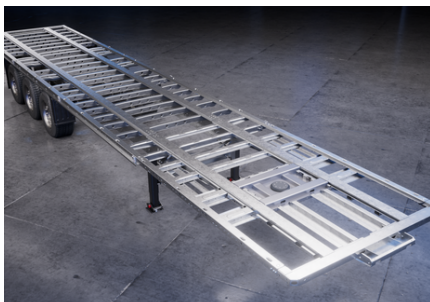

Fully galvanised construction

Retains its value for many years. The fully galvanised construction provides long-term protection for the chassis against rust and ensures that it retains its value throughout its entire service life – including a 10-year guarantee against rust-through.

8,000 kg floor load capacity as standard

The standard floor load capacity of 8,000kg ensures reliable operation in situations involving frequent forklift movements, high point loads and demanding loading conditions in day-to-day transport operations.

Optimised tare weight

Depending on the model, the INGENIOS chassis is up to 100kg lighter than the previous MODULOS chassis model. This means that more goods can be transported per journey.

Optional stanchion pockets

The 80 x 80mm stanchion pockets, designed for use in combined transport, expand the options for load securing and facilitate the safe transport of long loads.

Optimised vehicle integration

The new design paves the way for greater load capacity. Optimised chassis heights and increased manoeuvring clearance enhance flexibility in day-to-day use and compatibility with a range of tractor units.

A tough day's work on the road? You can watch it in comfort.

Reliable transport solutions do not end with the vehicle itself. That is why Schmitz Cargobull complements its products with services and digital solutions that support transport companies in their day-to-day operations and help ensure high vehicle availability.

Genuine spare parts – ordered online

to maintain performance

Order your spare parts quickly, affordably and easily from our online shop. They are usually delivered within 24 hours. Our Europe-wide network of service partners is on hand to assist you with maintenance and repairs.

Cargobull Euroservice

gets you back on the road quickly

No matter where your driver is on the road, the Cargobull Euroservice provides rapid assistance round the clock, 365 days a year, in 40 countries.
