

## Your complete solution from a single supplier.

### S.KO COOL EXECUTIVE Reefer Semi-Trailer.

The perfect premium transport refrigeration unit with optimised and constant temperature control.

TrailerConnect trailer telematics provides you with safety and transparency through the permanent monitoring of all parameters.

The Full Service contract covers all of the necessary maintenance, inspections and wear repairs.

More than 1,200 audited service partners for trailer service throughout Europe ensure first class after-sales support wherever you are.

### Upgrade your business.

Transporting temperature-controlled freight is one of the most demanding tasks in the transport sector. Ensuring that the goods are carried safely, maintaining the high hygiene standards and strict temperature control requirements are just as essential as the punctual delivery itself.

The S.KO COOL EXECUTIVE reefer semi-trailer offers a special service. It is the first complete solution from a single supplier which addresses every aspect of the trailers use. The perfectly co-ordinated components provide absolute reliability through top quality and impressive uptime.

### Reliability trumps all.

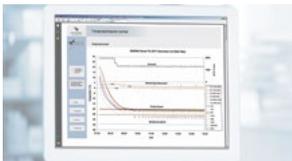

The benefits of the first complete solution at a glance:

- Efficient and safe transport of refrigerated goods.
- Maximum uptime through proven and innovative technologies together with permanent function monitoring.
- Perfect co-ordination of all technical components and interfaces.
- Outstanding price-performance ratio.
- Comprehensive, proactive service throughout the trailer's entire life cycle.
- One contact, one Europe-wide service network, one data management interface.

## Transport Refrigeration Unit

Efficient and safe transport of refrigerated goods.

The intelligent partial-load control of the refrigeration unit minimises temperature fluctuations.

The control panel allows the display and configuration of every aspect of the temperature management.

The number of cooling ribs at the front of the evaporator has been reduced to prevent them from icing up.

Two powerful, vertical radial fans on the condenser ensure high airflow.

The intake duct for the evaporator is protected behind the circulation wall.

The large oil sump ensures that the engine runs smoothly and extends the oil change intervals.

Large fuel and air filters increase the maintenance intervals.

The transport refrigeration unit successfully covered 500,000 km of endurance and load tests at the Schmitz Cargobull Validation Centre.

### The advantages at a glance.

- Precise temperature control throughout the entire interior with minimal fluctuation.
- Excellent economy combined with high-performance cooling through efficient motor management.
- High refrigeration performance for fast pull-down.
- The best heat output among the direct competitors for the shortest possible interruptions in goods cooling when defrosting.
- 50 % fewer defrosting cycles due to the ice-reducing evaporator design.
- Durable industrial motor with intelligent speed control and compressor with cylinder deactivation for low fuel consumption.
- Greater operational reliability and control thanks to the electronic control unit.
- Longer maintenance intervals due to the specially dimensioned wearing parts.
