

the lightweight pioneers

BERGERecotrail® – our story

Our story

In the middle of the Alps in Tyrol, our journey began with the sole aim of staying ahead.

Between the marble quarries near Verona and Tyrol, Johann Berger set the first milestone with specially developed lightweight trailers. Today, BERGERecotrail trailers move goods all over Europe.

Lightweight construction, precision, craftsmanship.

What began back then is the DNA of BERGERecotrail. Questioning the status quo. To go to the limit. Finding solutions that were previously unthinkable.

Less dead weight. Lower costs and CO₂ emissions. More load.

Thanks to high-strength fine-grain steel, the Reuleaux triangle design principle, closely positioned cross members, robust hybrid flooring and the highest standards of technology and quality. Made in Austria.

Once again, we are questioning the status quo and taking the next step.

Even more sustainable, durable, efficient, and absolutely robust. Together with our partner, Schmitz Cargobull, we are venturing into new territory, combining our experience in lightweight construction with the market leader's expertise in trailer construction. The result is the perfect trailer.

Lightweight pioneers for over 60 years.

The new generation BERGERecotrail combines the best of two worlds. For the most sustainable future of freight transport.

We stay ahead. Right from the start.

Features

- suitable for almost all goods and industries
- low tare weight for more payload
- fuel-saving and environmentally friendly

- suitable for steel coil and metal transport
- lower tare weight for more payload
- for maximum journey utilization

- Semi-trailer without body with tarpaulin
- especially for large, heavy and weather-resistant goods (building materials, agricultural machinery)
- low tare weight for maximum payload
- fuel-saving and environmentally friendly

3-axle trailer

- 24LTe
- 24LTOe
- Optimized wheelbase for e-trucks and beverage logistics

- 24LTCe

- 24LTeP*
- 24LTCeP* with coil trough

2-axle trailer

The best of two worlds

The new Evolution Generation semi-trailer is the result of the collaboration of two market leaders, who combined their passion and expertise. The BERGERecotrail chassis, with its advanced lightweight design, makes the semi-trailer highly efficient. The FLEXOS body with POWER CURTAIN from Schmitz Cargobull is a body without extension slats and ensures particularly short loading and unloading times. The result is the perfect semi-trailer.

Tailor-made service. From a single source.

Our transport solutions and services help you to make your fleet more economical, transparent and efficient.

- Customized financing solutions for the customer
- Attractive insurance packages for comprehensive protection
- 1 year free of charge: TrailerConnect® telematics and digital services for smart logistics
- Individual full service offer according to customer requirements
- Order original spare parts online and have them delivered in 24 hours
- Round-the-clock assistance: thanks to 1,400 service partners and 24-hour Cargobull Euroservice breakdown assistance throughout Europe

The material

BERGERecotrail®

The high-alloy, high-strength fine-grained steel type S700 is thermomechanically rolled for extremely high yield strength and minimum weight.

Schmitz Cargobull

In addition to the durable, lightweight and hard-wearing aluminium structure aluminium body and steel corner supports, the POWER CURTAIN, a heavy-duty tarpaulin with integrated aramid straps, protects goods from unauthorized access.

The construction

BERGERecotrail®

The Reuleaux triangle is a structural principle that enables optimal tension distribution, consistent stability, and robust sustainability with reduced weight.

Schmitz Cargobull

The curtainsider semi-trailer offers certified structural strength for various industries: DIN EN 12642 Code XL, beverage certificate (optional), automotive certificate (DL guideline 9.5., optional).

The production

BERGERecotrail®

One hundred percent of BERGERecotrail chassis are produced and assembled in Tyrol. We ensure the highest quality standards through the combination of robot-assisted precision and manual welding skills.
