

TrailerConnect® Data Management Center
and TrailerConnect® TourTrack

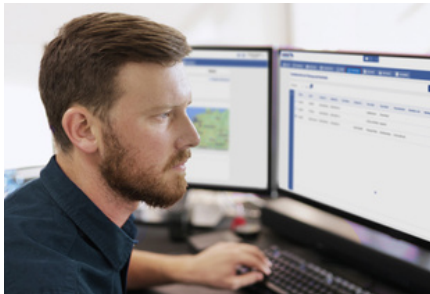

Transparency and Secure Collaboration

Complete visibility across your fleet, targeted data sharing and full data sovereignty: with the TrailerConnect® Data Management Center and TrailerConnect® TourTrack, you can manage data exchange throughout your network simply and efficiently.

From the Road to the Cloud.

Telematics data is essential for efficient transport and logistics operations. The TrailerConnect® platform enables collaborative working within a secure network, delivering greater transparency across the entire supply chain.

Consolidation Platform for all telematics data

Use the **TrailerConnect® Portal** as your platform for data integration, live tracking and trailer services, giving you access to all relevant telematics data.

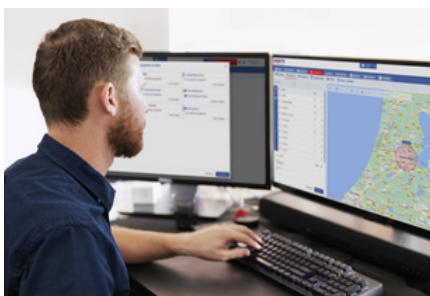

Freight Network at a glance

With the **TrailerConnect® Data Management Center**, you can connect with partners and subcontractors, providing a centralised overview of your transport network.

Selective Data Sharing with external systems

With just a few clicks, the **TrailerConnect® Data Management Center** enables you to share selected data and integrate third-party telematics systems through a wide range of interfaces.

Efficient Management and Transparent Logistics Processes

With **TrailerConnect® TourTrack**, you can monitor transports on an order-specific basis and respond to deviations in real time. Share data at shipment and order level while maintaining full control over your data.

You decide when, with whom, and what data you share.

The TrailerConnect® Data Management Center acts as a filter between your transport data and third-party providers, such as real-time visibility (RTV) platforms. You decide what data is shared with external partners.

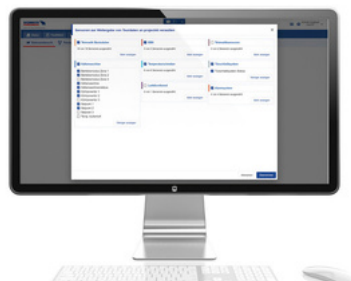

The TrailerConnect® Data Management Center is your central hub for setting up and managing all inbound and outbound data connections. Monitor and control your data flows from one central location.

Seamless Supply Chain Integration

Seamless interfaces to freight exchanges, transport management systems and real-time visibility platforms enable easy data import and export, as well as visualisation of your own transport network.

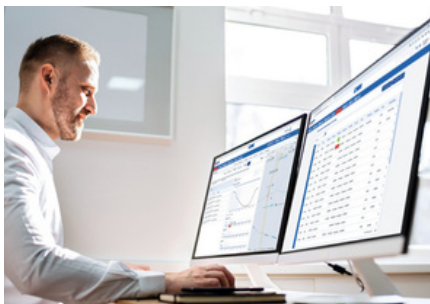

Full Control and Selective Data Sharing

Manage data sharing yourself and decide exactly what data should be shared selectively. You can also define filtering criteria before sharing order-related data with third parties.

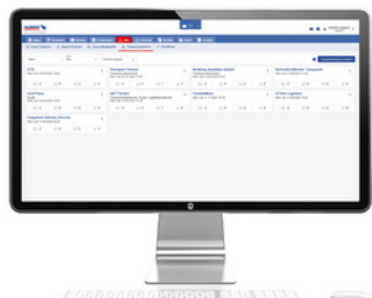

Greater Transparency and Clarity

Every partner within the supply chain gains access to the information required to fulfil transport tasks. At the same time, you retain full control and transparency over telematics data records during both data import and export.

Reduced Communication Effort

Share tracking data automatically and securely with just a few clicks.

Protection of Your Transport Network

Business-critical data relating to your transport network and participating subcontractors is comprehensively protected.

Secure Data Management

The platform complies with current GDPR requirements and is certified to the stringent ISO 9001, ISO 27001 and TISAX standards.

Monitor and track tours quickly and easily in real time.

Gain an instant, detailed overview of the status of your transport orders, shipments and network partners. Any deviations or delays are identified and displayed immediately.

Intuitive User Interface

For simple tour planning and monitoring

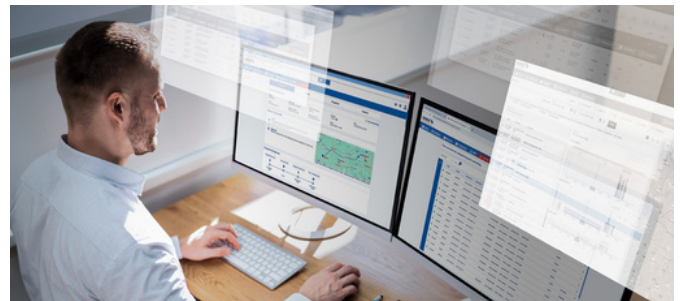

Thanks to intuitive operation and configurable dashboards, you always have a clear overview of your transport orders. Share transport data and generate reports automatically. The solution can be seamlessly integrated with and managed through your Transport Management System (TMS).

Controlled Data Sharing

For greater transparency across the supply chain

You remain in full control of who can access your transport data and when. By sharing data selectively, you create transparency across the supply chain and enable targeted track & trace capabilities, including comprehensive reporting.
